

CONTENTS

LIST OF FIGURES	xiv
LIST OF TABLES	xvi
ACKNOWLEDGMENTS	xvii
FOREWORD	xix
1 INFORMATION THEORY	1
1.1 Introduction	3
1.2 Information in an analog signal	4
Bibliography	5
2 CODING	7
2.1 Introduction	9
2.2 Huffman coding	10
2.3 Extended Huffman coding	13
2.4 Modified Huffman code	14
2.5 Examples	15
2.5.1 Text	15
2.5.2 Image compression	18
Bibliography	20
3 CHANNEL CAPACITY	21
3.1 Binary channels	23
3.2 Analog (or continuous) channels	26
Bibliography	30
4 INTRODUCTION TO CHANNEL CODES	31

5	BLOCK CODES	39
5.1	Introduction	41
5.2	Hamming codes	44
5.3	Interleaving	49
5.4	Bit Interleaved Parity codes	52
5.5	The importance of block size	55
5.6	Block erasure codes	58
5.6.1	Fountain codes	59
5.6.2	LT code	62
	Bibliography	65
6	LOW-DENSITY PARITY CODES (LDPC)	67
6.1	Introduction	69
6.2	Error-correcting power	70
6.3	LDPC error finding	73
6.4	How to build a good LDPC code	80
	Bibliography	81
7	CYCLIC CODES	83
7.1	Introduction	85
7.2	Error detection and correction	88
7.3	Cyclic Redundancy Check codes for error detection	95
7.4	Applying a CRC code: an example	98
	Bibliography	99
8	GALOIS FIELDS	101
8.1	Introduction to Galois Fields	103
8.2	Some common Galois fields	106
8.3	Other interesting Galois Fields	111
9	BCH CODES	113
9.1	Introduction	115
9.2	BCH(7, k) codes	115
9.3	BCH(15, k) codes	116
9.4	Parity Check matrix of a BCH code	117
9.5	The Berlekamp-Massey procedure	118
	Bibliography	119
10	GRAY CODES	121
	Bibliography	124

11 REED-SOLOMON CODES	125
11.1 Introduction	127
11.2 Error correction with the Kasami method	127
11.3 Error-correcting with the Berlekamp-Massey procedure	129
Bibliography	131
12 GOPPA CODES	133
12.1 Introduction	135
12.2 A first Goppa code	136
12.3 A Goppa code decoded with a BCH decoder	137
12.4 A canonical Goppa code	144
12.5 The standard way to build a Goppa code	145
12.6 Binary Goppa code	148
Bibliography	150
13 A GENERAL DECODING PROCEDURE	151
14 LDPC CODES WITH GALOIS FIELDS	163
14.1 A simple syndrome-based method to detect and correct errors	165
15 TCH CODES	171
15.1 Introduction	173
15.2 Generator polynomial	173
15.3 Correlation as a decoding procedure	175
15.4 Error correction capacity	177
Bibliography	178
16 CODE CONCATENATION	179
Bibliography	183
APPENDICES	185
A. CODING	187
B. BLOCK CODES	189
B.1 Block erasure codes	189

C. LOW-DENSITY PARITY CODES	191
C.1 LDPC error-finding	191
C.2 How to build a good LDPC code	193
D. CYCLIC CODES	195
D.1 Error detection and correction	195
E. GALOIS FIELDS	199
E.1 Simplification in polynomial form	200
E.2 Exponential to polynomial form	200
E.3 Polynomial to exponential form	201
E.4 Polynomial to binary (GF) form	201
E.5 Exponential to binary (GF) form	201
E.6 Binary to decimal (GF) form	202
E.7 Decimal to binary (GF) form	202
E.8 Binary (GF) to polynomial form	202
E.9 Binary to exponential form	203
E.10 Decimal (GF) to polynomial form	203
E.11 Decimal (GF) to exponential form	203
E.12 DecimalGF to exponential form	203
E.13 Finite Fields to exponential form	203
E.14 Exponential to Finite Fields form	203
E.15 Additions in exponential form	204
E.16 Inversion in exponential form	204
E.17 Fraction in exponential form	204
E.18 Simplification in exponential form	204
F. BCH CODES	205
F.1 locator	205
F.2 errpos	206
G. GRAY CODES	207
H. REED-SOLOMON CODES	209
H.1 syndromeexp	209
I. GOPPA CODES	211

J. A GENERAL DECODING PROCEDURE	213
K. LDPC CODES WITH GALOIS FIELDS	215
L. TCH CODES	217
M. CODE CONCATENATION	219
